

# Part 1 – Club Foot: Underlying Biomechanics and Consequences with Ula Krzanowska

This two-part webinar series Ula Krzanowska dives deep into the causes and consequences of club foot and high-low syndrome and explains the available treatment and management options.

Use the [converter](#) to find your local time. Visit the [webinar instruction page](#) for more info.

**TYPE** Online

**WITH** Ula Krzanowska

**WHEN** Mar 1, 2026 -  
1:00 pm (EST)

**COST** \$100, \$175 non-member

**CREDITS** 6

**STATUS** Active

**RECORDING AVAILABLE**

A recording will be available for two years

## Part 1 – Club Foot: Underlying Biomechanics and Consequences

Club foot is just the tip of the iceberg, a symptom of highly compromised limb biomechanics. If managed well, some club-footed horses are able to perform at high levels. However, it is essential to understand these biomechanical constraints before attempting to correct the problem, in order not to make it worse or cause additional pathologies.

## Part 2 – Flat Foot: Reasons and Possible Solutions

High-low syndrome is a broad and complex subject that should be treated as a symptom of general biomechanical imbalance rather than a specific hoof disorder. It is a broad term that includes a wide range of possible configurations. One of the common elements of high-low syndrome is a flat foot, which may have multiple underlying causes and therefore requires different solutions.

**Ula**

**Krzanowska,**  
the Hoof  
Architect,  
graduated from  
Technical  
University of  
Lodz, got her  
MSc degree in  
Architecture  
and practiced  
as an architect  
and illustrator  
in Poland and  
the  
Netherlands for  
a couple of  
years while

trimming horses, until she decided to follow her passion and fully switch professions. She is now a full-time farrier, horse owner, horse rider, illustrator and researcher. She incorporates her architectural background into her farrier work and hoof care educational projects, aiming to combine both scientific and empirical approaches to get a thorough understanding of hoof morphology and its two-way relationship with conformation and posture.

Ula currently works on all types of horses, from pasture pets to high performance horses, and referral cases from veterinarians. In her free time she travels extensively, developing her own personal research regarding hoof morphology and educational hoof care projects, including online publications as The Hoof Architect.

\*Parts 1 and 2 are included in your purchase.
