

# EMS (IR) and PPID: Diagnosis and Management (Part 2)

## Part 2 – Nutrition Considerations for Horses with Metabolic Disorders

*This webinar fulfills the metabolic studies requirement for PHCP students.*

Join  
Dr.

Gustafson to learn about how to safely feed horses with metabolic disorders such as EMS and PPID. Attendees will learn what hay is best, ideal grazing times, and the effects of pasture and hay carbohydrates on insulin. Learn how to wade through the myriad of supplements on the market and how to spot bogus treatments and supplements.

You will understand the importance of forage testing, the concept of mineral balancing, and what is and is not “safe” to feed. This webinar is packed with information that will help horse owners and hoof care providers make informed decisions about equine nutrition for metabolic horses.

*All webinar times are listed in Mountain Time (Denver). Use the [converter](#) to find your local time. Visit the [webinar instruction page](#) for more info.*

**Kathleen Gustafson, PhD, is a research scientist in the field of nutrition and neuroscience. She became involved with the Equine Cushing's and Insulin Resistance (ECIR) Group when her Missouri Fox Trotter, Joe, developed insulin resistance and laminitis. Following the**

**management protocols of the ECIR group, Joe made a full recovery and was restored to good health and complete soundness. Impressed by the ECIR group's focus on evidence based science she first volunteered as a responder on the ECIR Outreach Group and now serves as a director and research advisor for the nonprofit. She has over 70 peer-reviewed publications, national and international patents, and served as both principle and co-investigator on clinical trials sponsored by the National Institutes of Health. She has co-authored papers with Dr. Eleanor Kellon on topics related to metabolic disorders in horses.**

**Dr. Gustafson began studying equine nutrition in 2005 and is the owner of Great Plains Forage Balance. She maintains a forage database and consults with owners, farriers, and veterinarians so they may formulate a comprehensive and practical feeding plan based on nutrient requirements.**
